# Carries more weight than the others

## Features and Benefits:

- 350lb load capacity enables you to build larger, heavier doors of up to 700lb.
- Made with pressed metal components, forged rivets and axels, to ensure product remains robust under load.
- CNC engineered wheels for increased durability.
- Polymer wheels reduce noise and minimise track wear, guaranteeing system performance over time.
- Precision bearing components reduce operating force.
- Single bogey carriage ensures balanced load distribution which guarantees smooth system operation.

- Retains structural integrity during and after installation which ensures product durability and longevity.
- Applicable for aluminium, vinyl, timber, fiberglass, and steel.

## Reduced Rolling Resistance:

AAMA 906 certified for durability and performance, the 8000 series takes over where the 7000 series leaves off, carrying the most weight in its class. Standard models available with **stainless steel** or **polymer** CNC engineered wheels:

- 1.50", 1.65", 1.81" and 1.90" wheel diameter
- Spacers and mounting tabs available upon request
- 0.49" adjustment range
