# Flexible rollers that easily engage

## Features and Benefits:

- 40kg per roller weight capacity
- Easily detachable inner housing allowing you to rotate to the desired offset quickly and efficiently without removing the outer housing from the door
- Three wheel positions to allow for variability (-1mm, +1mm and 0mm)
- Rack adjustment mechanism allows full adjustment in a single revolution
- Anti-backwind feature enables the product to remain in adjusted position
- Spring loaded mechanism enables constant contact with the track reducing the possibility of the door derailing
- Polymer wheels reduce noise and minimise track wear

## Part of the KWIKfit™ range

KWIKfit™ Switch is the latest addition to our KWIKfit™ series of rollers. It is designed to simplify the process of achieving a wheel offset without the need to remove the entire roller assembly from the screen door. With the outer housing still in place, simply detach the wheel, adjust the offset and put the wheel back in place. Aligning misaligned screen doors with their interlock has never been easier.

## Adjustment range:
