TraXtar™ is a registered trademark of Anthony Innovations Pty Ltd.

Designed with functional criteria in mind

Features and Benefits:

- 150kg load capacity enables you to build larger, heavier doors of up to 300kg.
- 37mm height enables you to use low profile extrusions which reduce sightlines, making the transition between the outdoors and the indoors seamless.
- Length spreads the load over a longer section of the track. Combined with a 37.5kg point load which exceeds current market offerings of 50kg, this significantly reduces rolling resistance.
- The dual layer bogie design ensures distribution of weight to each wheel, adding to the product's performance.
- Modular design means TraXtar™ is adaptable to most systems, making it easy to upgrade so you can confidently extend your offering to customers.
- Machined polymer tyres and stainless precision bearings give TraXtar™ wheels superior durability and reliability.

Reduced Rolling Resistance:

When compared to other products on the market, TraXtar™ significantly reduces rolling resistance so your door and window systems can operate smoothly and with ease.

5x easier to move than its competitor	Initiating Force
